                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence encodes a human transcription factor designated htfIIIA. The polypeptide is probabaly a DNA-binding protein probably involved in initiating transcription of the gene for ribosomal RNA 55 and maintaining the stability of transcription of other control genes therapeutic or diagnostic compositions for diseases associated with disorders of transcriptional control, particularly cancer or other inherited diseases. The htfIIIA polynucleotide can also be used to detect anomalies in gene transcription, particularly for diagnosis of inherited disease, also for studying diseases involving hTFIIIA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 1273

CC (GCA), by detecting the level of expression of gene(s) (GS) activation (CC (GCA), by detecting the level of expression of gene(s) (GS) identified by CD DNA chip analysis as given in the specification and comparing CC DNA chip analysis as given in the specification and comparing CC GC, where differential expression of GS is indicative of GCA.

CC Also included are modulating (M2) GA by contacting GC with an agent CC characterial the expression of at least one gene in GS; (2) screening (M3) CC for an agent capable of modulating GCA or an inflammation (especially CC chronic) in a tissue, an allergic response in a subject, exposure of a CC subject to a pathogen or sterile inflammatory disease, by detecting the CC chronic) in a tissue, an allergic response in a subject, exposure of a CC subject to a pathogen or sterile inflammatory disease, by detecting the CC chronic) in a tissue, an allergic response in a subject to a pathogen or sterile inflammatory disease, by detecting the CC chronic) in a filammatory disease, by detecting the CC chronic of expression in a sample of the tissue of gene(s) from GS, where CC the level of expression in a subject, exposure of a subject to a pathogen or sterile inflammation (especially chronic) or in a tissue, an allergic response is a subject to a pathogen or flammation with an agent that modulates the expression of gene(s) from GS, M3 is useful for screening an agent capable of modulating GCA; M3 is useful for screening an agent capable of modulating GCA; M3 is useful for screening an agent capable of modulating GCA; M3 is useful for detecting GCA; M2 is useful for consistency disease, capacity capable of modulating GCA; M3 is useful for screening an agent capable of modulating GCA; M3 is useful for screening an agent capable of modulating GCA; M3 is useful for screening an agent capable of modulating GCA; M3 is useful for screening an agent capable of modulating GCA; M3 is useful for screening GCA; M3 is useful for screening GCA; M3 is useful for capacity for many for the propo

                                                                                          The sequence encodes human transcription factor-IIIA (hTFIIIA), a constant with 9 zinc finger domains, which is necessary for the initiation of 55 RNA gene transcription, binding to an internal control region of the 55 gene. The coding region control region of the 55 gene. The coding region of the gene has been isolated from a human foetal brain cDNA library (Claimed) is given in ANT14037. A fragment lacking a 5'-portion of the gene has been isolated by complementary to the gene has been isolated from a human foetal brain cDNA library (OTK7-1), and the 5'-portion of the gene has been isolated by complementary to Hil-E (AAT14040), Hil-H (AAT14041) and AP-2 (AAT14042), complementary to anchor primer AAT14043. Reverse transcription using H-11R is followed by anchor primer ligation and PCR using AP-2 and Hil-E, to give a full-length cDNA, OTK7. The gene and its encoded protein may be used in diagnosis, identification or therapy of hereditary diseases such as cancer, or other diseases resulting from abnormal transcriptional control, and to analyse the mechanisms involved in

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        δõ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           20
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   망
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         밁
The sequence encodes human transcription factor-IIIA (hTFIIIA),

a DNA binding protein with 9 zinc finger domains, which is necessary

for the initiation of 5S RNA gene transcription, binding to an

internal control region of the 5S gene. A fuller cDNA sequence

with flanking regions is given in AAT1403B. A fragment lacking a

5'-portion of the gene has been isolated from a human foetal brain

cDNA library (OTK7-1), and the 5'-portion of the gene has been

isolated by 5'-rapid amplification of cDNA ends using primers H11-R

(AAT14039), H11-E (AAT14040), H11-H (AAT14041) and AP-2 (AAT14042),

complementary to anchor primer AAT14043. Reverse transcription using

H-11R is followed by anchor primer ligation and PCR using AP-2 and

H11-E, to give a full-length cDNA, OTK7. The gene and its encoded

protein may be used in diagnosis, identification or therapy of

hereditary diseases such as cancer, or other diseases resulting from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1140

                 The present sequence represents a fragment of a human transcription factor (designated htfIIA) gene. The polypeptide is probabaly a DNA-binding protein probably involved in initiating transcription of the gene for ribosomal RNA 5s and maintaining the stability of transcription of other control genes. The htfIIIA polynucleotides and polypeptides are used to make therapeutic or diagnostic compositions for diseases associated with disorders of transcriptional control, particularly cancer or other inherited diseases. The htfIIIA polynucleotide can also be used to detect anomalies in gene transcription, particularly for diagnosis of inherited disease, also for studying diseases involving hTFIIIA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1199

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   밁
                                                                                       cancer-associated nucleic acid molecules (N) and proteins (P), where the proteins are collectively known as colon cancer antigens. The colon cancer antigens have cytostatic activity and can be used in gene therapy and vaccine production. N and P may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate P expression. For example, N and P may be used to treat disorders in a patient's genome that affect the activity of P by expressing in a patient's genome that affect the activity of P by expressing inactive proteins or to supplement the patients own production of P. Additionally. N may be used to produce the colon cancer-associated Ps, by inserting the nucleic acids into a host cell and culturing the cell to express the proteins. N and P can be used in the prevention, diagnosis and treatment of colorectal carcinomas and cancers. AAH37196 to AAH37204 and AAB77789 represent sequences used in the exemplification of the

ABP43228) and to cDNAs encoding them (ABQ54131-ABQ56305), and also encompasses polypeptides 90% identical and polynucleotides 95% identical to the sequences of the invention. The invention additionally relates to recombinant vectors and host cells comprising human ovarian antigen polynucleotides, antibodies against human ovarian antigens, and the use of ovarian antigen polynucleotides and polypeptides in diagnosing, treating, prognosing or preventing various ovary and/or breast-related disorders. Such conditions include ovarian cancer and breast cancer, and

Ovarian antigen polypeptides and polynucleotides may also be used in screening for compounds which modulate ovarian antigen expression or activity. The polynucleotides may further be used for gene therapy, chromosome mapping, in the identification of individuals and in forensic analysis, and the polypeptides may be used as food additives or to prepare antibodies useful in disease diagnosis, drug targeting and phenotyping. The present reguence represents cDNA encoding a human ovarian antigen of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                disorders (e.g., infertility, disorders of pregnancy, anovulation, polycystic ovary syndrome, ovarian cysts, and dysmenorrhoea), endocrine disorders, infections (e.g., chiamydia, HIV, toxoplasmosis, and toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic toxic t

The polynucleotides and encoded polypeptides are useful in pharmaceutical compositions, such as vaccines, for the diagnosis, prevention, and treatment of colon cancer. Polynucleotide sequences may be used as hybridisation probes or primers, and in the design and preparation of ribozyme molecules for inhibiting expression of tumour polypeptides and proteins in tumour cells. The compositions are useful for stimulating an immune response against cancer, particularly for the immunotherapy of colon cancer, and as markers for the progression of cancer.

                                                                                                                                                                                                   The invention relates to polynucleotides encoding colon tumour proteins. The polynucleotides and encoded polypeptides are useful in pharmaceutical compositions, such as vaccines, for the diagnosis, prevention, and treatment of colon cancer. Polynucleotide sequences may be used as hybridisation probes or primers, and in the design and preparation of ribozyme molecules for inhibiting expression of tumour polypeptides and proteins in tumour cells. The compositions are useful for stimulating an immune response against cancer, particularly for the immunotherapy of colon cancer, and as markers for the progression of cancer.

ABK44450-ABK46237 represent coding sequences of human colon tumour proteins of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1154

ABQ56306 to ABQ60787 represent isolated nucleic acids (I) differentially expressed in cancer tissues. ABB78993 to ABB79004 represent proteins encoded by the ABQ60776 to ABB60787 nucleic acid sequences. (I) can be used in antisense therapy. An antibody immunoreactive with a polypeptide encoded by (I) is useful for detecting cancer in a patient sample, and for detecting the presence or absence of a polynucleotide encoded by a nucleic acid which hybridises to (I) in a cell. A probe/primer derived from (I) can be used for determining the presence of a nucleic acid which hybridises to (I), and for determining the phenotype of cells in a sample of cells from a patient. (I) is useful for determining the presence or state of other type of cancer, in antisense therapy, to generate macroarrays on a solid surface, to identify a chromosome on which the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New isolated nucleic acid that is differentially expressed in tissues useful for determining the presence of colon cancer in or tissue type, and in antisense therapy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1154
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1094

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to an isolated nucleic acid molecule (I) comprising a nucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) of the specification or its complement. (I) is useful for:

(a) assessing whether a patient is afflicted with prostate cancer;
(b) monitoring the progression of prostate cancer in a patient;
(c) assessing the efficacy of a test compound to inhibit prostate
                                                                                                              Human; prostate pharmacogenomic
                                                                                                                                                                                                                                                                                                                                                   1037
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                (d) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient; (e) selecting a composition for inhibiting prostate cancer in a patien (f) assessing the prostate cell carcinogenic potential of a compound; (g) determining whether prostate cancer has metastasized in a patient; (h) assessing the aggressiveness or indolence of prostate cancer in a

(I) is useful for:

Cc (a) assessing whether a patient is afflicted with prostate cancer;

Cc (b) monitoring the progression of prostate cancer in a patient;

Cc (c) assessing the efficacy of a test compound to inhibit prostate

Cc cancer in a patient;

Cc (d) assessing the efficacy of a therapy for inhibiting prostate cancer

in a patient;

(e) selecting a composition for inhibiting prostate cancer in a patient;

(f) assessing the prostate cell carcinogenic potential of a compound;

(g) determining whether prostate cancer has metastasized in a patient

(h) assessing the aggressivence.

                                                                                                                                                                                                                                                                                                                                                         1341
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention describes a human eukaryotic initiation factor (eIF) designated heIF3), which is expressed in human dendritic cells. heIF3 has translation initiation factor activity. Also described in the present invention are methods for the preparation and detection of the heIF3 protein and nucleotide sequences. The present sequence encodes heIF3, as given in the present invention.

The invention relates to isolated polynucleotide (I) and C polypeptide (II) sequences. (I) is useful as hybridisation probes, CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags CC for identifying expressed genes. (I) is useful in gene therapy techniques CC (II). (II) is useful in generating antibodies against it, detecting or CC quantitating a polypeptide in tissue, as molecular weight markers and as CC a food supplement. (II) and its binding partners are useful in medical CC imaging of sites expressing (II). (I) and (II) are useful for treating CC disorders involving aberrant protein expression or biological activity. CC The polypeptide and polynucleotide sequences have applications in CC diagnostics, forensics, gene mapping, identification of mutations CC responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and CC amino acid sequences. AAS64197-AAS94564 represent novel human CC diagnostic coding sequences of the invention.

CC Note: The sequence data for this patent did not appear in the printed CC art from wino but was obtained in electronic format directly from WIPO CC art from wino in the printed contractions obtained in electronic format directly from WIPO case of the printed of the sequences of the sequences.

                                                                                                                                                                                                                                                    The invention relates to polynucleotides encoding colon tumour proteins. The polynucleotides and encoded polypeptides are useful in pharmaceutical compositions, such as vaccines, for the diagnosis, prevention, and treatment of colon cancer. Polynucleotide sequences may be used as hybridisation probes or primers, and in the design and preparation of ribozyme molecules for inhibiting expression of tumour polypeptides and proteins in tumour cells. The compositions are useful for stimulating an immune response against cancer, particularly for the immunotherapy of colon cancer, and as markers for the progression of cancer.

ABK44450-ABK46237 represent coding sequences of human colon tumour
                                                                                                                                                                                               proteins of the invention.

Note: With the exception of SEQ ID No 1 and 2, the sequence data for this patent did not form part of the printed specification but supplied by the European Patent Office.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     03-AUG-2000; 2000US-223283P.
